# EcoSavers® Radiator Key silicon keychain

The EcoSavers® Radiator Key is a must have in any household using a central heating system.

De-venting (bleeding) a radiator is a quick and easy way to save energy. By taking air out of the system, the radiator will operate more efficiently and therefore less energy is needed to heat up the room.

Now you have a radiator key on a silicon keychain, so you can easily find a key when you need one.
