

Global Warming

The BIG problem is apathy.

In the daily rush of life most people don't think much about the future and they certainly don't really consider that their children, grand-children and great grandchildren will one day be as old as they are now. They certainly don't want to contemplate what problems this future holds for them. If they did then apathy wouldn't be the big problem.

It is facing up to this future and the increasing problem of global warming that will affect generations to come, that makes responsible parents and grandparents think about taking action today.

So what can you do to reduce the ever increasing amount of Carbon Dioxide released into the atmosphere? What can any of us do?

Fewer trips to Tesco, switching off appliances, lagging lofts and installing double glazing are some of the generally accepted ways to curb our energy use.

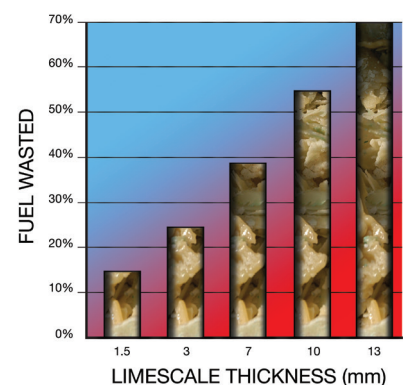

However there is one way that can really help in your energy conversion that is to treat hard water to prevent it forming limescale.

You've only to look at this graph (pic) to show you how much energy is lost by limescale and if you want to know just how hard your water is then just go on line to <http://www.littleplumber.com/hardwatertester.html> to get your FREE hard water tester strip.

The fact is that what you'll spend on a small device like Little Plumber will be saved by using less energy in a short time. We estimate payback is between one and two years.

Meanwhile you'll enjoy the real benefits of softer water, less detergent, softer skin and hair and all with absolutely no maintenance and a full 12 month money back guarantee.

Energy lost because of limescale

It looks like a win-win. Help the planet and your children and grandchildren while also benefiting from lower energy bills and softer water.

SPECIAL READER OFFER: If you would like to get a FREE tester strip sent in the post then go to <http://www.littleplumber.com/hardwatertester.html> but if you know you've got hard water and want to do something about it now then go to www.littleplumber.com and insert the Voucher Code (TBA) to qualify for a 10% discount on any product.
