GRASSHOPPER

POWERplus® Grasshopper

Hybrid Power
Solar & Dynamo
EDUCATIONAL TOY CAR

POWERplus introduces the Grasshopper, an exciting and educational hybrid power toy car .

The Grasshopper uses the latest technology in eco energy power and teaches children that they can play with electrical toys without using batteries or mains power.

By winding the generator, the Grasshopper can move forwards and backwards. On sunny days, children can play outside with the Grasshopper and then the car can be powered by using the solar energy panel.

The DIY kit is easy to build with the step-by-step instruction manual. Children can build their own hybrid powered eco car and play with it without using batteries.

HYBRID POWER POWERED BY

The POWERplus® Junior line is a selection of eco energy products for children. This educational line of products teaches children how to use renewable energy sources like solar and human power.
